Brian **Weedon**

SOFTWARE ENGINEER

☐ (703) 898-3051 | ✉ bweedon03@gmail.com

Untangle Recruitment   *October 19, 2021*

UNTANGLE

To whom it may concern,

About Me

I'm a software engineer that has 8 years of experience working on applications of different sizes and types. At Proactis(then Perfect Commerce), I started off as an intern while I was in my final semesters of college at Christopher Newport University. When I graduated, I was offered a full-time position. I worked as a software engineer, adding value to the different multi-tenant products that I worked on.

I left Proactis for Progeny Systems after two and a half years. At Progeny Systems, I worked on multiple smaller Java applications(most web applications), got a glimpse into the power of AWS and it's competitors with a couple web applications I worked on, and learned about the government contracting world.

After a year and a half, I returned to Proactis as the lead(and only) developer on one of the products I worked on previously. This product was a multi-tenant C#/.NET application. Over the rest of my career at Proactis, I led development on two different Java multi-tenant web applications. I didn't enjoy being a lead at this company, but I was able to transition back to a software engineer, where I was able to focus more on adding value technically to the products, which I enjoyed much more.

Why Untangle?

Untangle looks like it would be a great company to work for. Based on the Senior Software Engineer advertisement on your website, I have the experience you are looking for in Java. I have also done a bit of work with Go at Proactis.

Networking can be one of the more complicated pieces in bringing applications and infrastructure together. I haven't had a ton of experience with it, but I really enjoy learning new things and challenging myself to better understand the bigger picture of how everything pieces together.

Why Me?

As I said above, I believe I have the experience in Java that you are looking for, and I have a bit of experience in Go. One thing that I feel like I do a pretty good job at is picking up on how the application works and being able to contribute meaningful code quickly.

I would love to help provide value to Untangle and its products, as well as work on making other companies infrastructures more secure.

Sincerely,

Brian Weedon
